

## Curriculum Intent – Computing

Computing capability is an essential skill for life and enables learners to participate more readily in a rapidly changing world. At Stroud Valley Community Primary School, we aspire to provide all children with not only the skills to use a range of technology, but also gain the life-long thinking skills and love for learning to continue to develop their passion for computing, throughout their time at primary school and beyond. Digital technology plays an integral part in the lives of everyone and has the power to enhance the lives of all.

We aim to enhance and extend children's learning across all of the three key areas:

- Digital literacy.
- Computer Science.
- Information Technology.

E-Safety underpins our curriculum and is embedded throughout, reflecting the importance of our core values of being **responsible**, **kind** and **safe**. We believe that all pupils should gain the confidence and skills they need to prepare them to be safe, active and responsible participants in this digital world.

Consequently, being digitally literate – the ability to use information and communication technology - is essential for all learners and will help to ensure their future readiness.

Through stimulating and challenging experiences, our children will continue to develop their love for learning and become confident and independent users of technology.
